✓ 1. Predict

YOLOv8 may be used directly in the Command Line Interface (CLI) with a `yolo` command for a variety of tasks and modes and accepts additional arguments, i.e.

`imgsz=640`. See a full list of available `yolo` [arguments](#) and other details in the [YOLOv8 Predict Docs](#).

```
# Run inference on an image with YOLOv8n
!yolo predict model=yolov8n.pt source='https://ultralytics.com/images/zidane.jp

✓ 1. Detection

YOLOv8 *detection* models have no suffix and are the default YOLOv8 models, i.e.

`yolov8n.pt` and are pretrained on COCO. See [Detection Docs](#) for full details.

```
# Load YOLOv8n, train it on COCO128 for 3 epochs and predict an image with it
from ultralytics import YOLO

model = YOLO('yolov8n.pt') # load a pretrained YOLOv8n detection model
model.train(data='coco128.yaml', epochs=3) # train the model
model('https://ultralytics.com/images/bus.jpg', save=True) # predict on an image
